Description

Balance

Balance was specifically designed for women whose breasts are too small, to balance the proportions. Many women suffer because their breasts are too small. Often their self-assurance is diminished, they behave in a self-conscious manner, and they suffer because of their appearance.

Balance can balance the proportions of your body in a simple yet effective way! The support is simply placed under your natural breasts in the bra thereby lifting your breasts in the optimal position. The silicone is very soft and flexible, thus it feels and moves like a real breast. The bent shape and curved projection make it possible for the the Push up to supply this optimal feel and fit.
